COURSE CODE: DJS22ITL307   **DATE: 2/10/23**

COURSE NAME: Web Programming Laboratory   **CLASS:SY. BTech**

NAME: ANISH SHARMA

EXPERIMENT NO. 03

CO/LO: Develop web applications.

AIM / OBJECTIVE: Design responsive web site using bootstrap

DESCRIPTION OF EXPERIMENT:

EXCLUSIVE BOOTSTRAP FEATURES:

Quickly customize components
Apply any of the bootstrap included utility classes to the components
to customize their appearance, like the navigation example below.
There are predefined hundreds of classes available from positioning
and sizing to colors and effects.

Create and extend utilities
We can use Bootstrap's utility API to modify any of our included utilities or
create your own custom utilities for any project. Import Bootstrap first, then use
Sass map functions to modify, add, or remove utilities.

Bootstrap Icons
It is an open source SVG icon library featuring over 1,800 glyphs, with more
added every release. They're designed to work in any project, whether you use

Bootstrap itself or not. Use them as SVGs or icon fonts—both options give you vector scaling and easy customization via CSS.

Bootstrap Grid System

The Bootstrap Grid System allows up to 12 columns across the page. You can use all 12 columns individually or you can groups the columns together to create wider columns.

Borders

Border utility is used to quickly change the border-style and border-radius of an element. It is mainly used for images, buttons, or any other element.

Flexbox

Flexbox is used to quickly manage the layout, alignment and sizing of grid columns, navigation, components, and more with a full suite of responsive flexbox utilities.

Bootstrap Basic Table:

The basic Bootstrap table has a light padding and only horizontal dividers. The **.table class** is used to add basic styling to a table.

SOURCE CODE:

*bootstrap.min.css & bootstrap.bundle.min.js aren't included in the PDF due to the large size
